

Chrysler Drivability Solutions

Chrysler and Jeep engine controls have undergone big changes as the company has changed hands. The influence of Daimler and Fiat technologies can be seen in the systems and component changes as well. The communications bus has also changed and new vehicles use a more fault tolerant version called PowerNet. You need good information to successfully diagnose drivability and emissions problems on these vehicles and this class will give you the edge on diagnosis. During this class we will diagnose misfire, stalling, low power, lack of communications, and a variety of other issues on Chrysler vehicles. Get ready to solve your customer's problems on these vehicles.

Attend this class to learn about:

- Misfire diagnosis
- Chrysler fuel control
- Chrysler vehicle communications systems
- EVAP diagnosis
- Electronic throttle control
- Diagnostic and repair tips

Don't forget your registration card!
